

**NOTICE TO ALL GUESTS USING ALPINE TOURING (AT) SKI BOOTS**

**PLEASE READ AND ACKNOWLEDGE**

We recommend the use of ISO 5355 compliant alpine ski boots and ISO 9462 compliant alpine ski bindings for heliskiing and snowcat skiing. The retention/release functionality of a traditional alpine ski boot/alpine ski binding set up has been tested over many years and it is expected that this boot/binding combination will function within the binding manufacturer's stated parameters. The functionality of ISO 9523 compliant AT ski boots with ISO 5355 compliant alpine ski bindings, AT bindings or MNC (MultiNorm Certified) bindings is still under evaluation and may not provide the same level of performance as a traditional alpine ski boot/alpine ski binding set up. This may contribute to non-release of the binding during an avalanche.
